

# Restaurarea unei grup statuar roman, reprezentând pe zeul Jupiter

Leonard IONESCU\*

## Abstract:

### Restoration of a Roman Statuary Group, representing the God Jupiter

*The statuary group (Jupiter Fulminans) is composed of three components: a statuette representing the God Jupiter, an eagle figure and a socket. Its precarious state of conservation imposed a detailed physical - chemical analysis, and the applied restorative treatments required a complex approach. The use of modern restorative methods such as ultrasound, laser or vacuum treatments made this piece regain its shape, chemical and mechanical stability.*

**Keywords:** *statuary group, Jupiter Fulminans, bronze, ultrasound, laser treatment, vacuum, restoration, conservation*
